

WE CLAIM:

1. A solid antiperspirant and/or deodorant composition exhibiting a low white residue on human skin of less than 0.55 as measured by a reflectometer on the composition applied to a human underarm which composition comprises:
- 5 (a) from 4-15% by weight based on the total weight of the composition of at least one siliconized polyamide of Formula IIIA as a primary gellant:

Formula IIIA

10 where:

- (1) DP is a number in the range of 5-30;
- (2) n is a number selected from the group consisting of 20-200;
- (3) X is a linear or branched chain alkylene having 1-30 carbons;
- (4) Y is selected from the group consisting of linear and branched chain alkylenes
- 15 having 1-40 carbons, wherein:

(A) the alkylene group may optionally and additionally contain in the alkylene portion at least one of the members of a group consisting of (i) 1-3 amide linkages; (ii) C5 or C6 cycloalkane as a cycloalkylene linkage; and (iii) phenylene optionally substituted by 1-3 members selected independently from the group consisting of C1-

20 C3 alkyls; and

(B) the alkylene group itself may optionally be substituted by at least one member selected from the group consisting of (i) hydroxy; (ii) C3-C8 cycloalkane; (iii) 1-3 members selected independently from the group consisting of C1-C3 alkyls; phenyl optionally substituted by 1-3 members selected independently from the group consisting of C1-C3 alkyls; (iv) C1 - C3 alkyl hydroxy; and (v) C1 - C6 alkyl amine;

25 or $Y = Z^2$ where

5

wherein each of R^{20} , R^{21} are independently selected from the group consisting of linear and branched C1-C10 alkylenes; R^{22} is selected from the group consisting of linear and branched C1-C10 alkanes; and T is selected from the group consisting of (i) 10 a trivalent atom selected from N, P and Al; and (ii) -CR, where R is selected from the group consisting of hydrogen, methyl, ethyl, propyl, isopropyl, a siloxane chain, and phenyl, wherein the phenyl may optionally be substituted by 1-3 members from the group consisting of methyl and ethyl; and

(5) each of $R^1 - R^4$ is independently selected from the group consisting of methyl, 15 ethyl, propyl, isopropyl, a siloxane chain, and phenyl, wherein the phenyl may optionally be substituted by 1-3 members from the group consisting of methyl and ethyl;

wherein the polyamide of Formula IIIA has:

- (i) a silicone portion in the acid side of the polyamide;
- 20 (ii) an average molecular weight of at least 10,000 daltons; and
- (iii) a polydispersity of less than 20;

(b) a co-gellant which is up to 10 weight % of at least one member selected from the group consisting of N-acyl amino acid derivatives; dibenzylidene sorbitol; N,N'-hexamethylenebis-(10-undecenamide); amine stearate; 12-hydroxystearic acid; stearyl 25 alcohol and waxes;

(c) a solvent system for the primary gellant and co-gellant in an amount of up to 90%; and

(d) a high density antiperspirant active having a bulk density of at least 0.45 g/cm^3 and used in an amount to have a deodorant and/or antiperspirant effect;

30

wherein all amounts are in percent by weight based on the total weight of the composition.

2. A composition as claimed in Claim 1 wherein the amount of co-gellant is in the range of 0.5-2.0% by weight based on the total weight of the composition.
3. A composition as claimed in Claim 1 wherein the co-gellant comprises up to 5 weight % of one or more members selected from h group consisting of dibutyl lauroyl glutamide; dibenzylidene sorbitol; N,N'-hexamethylenebis-(10-undecenamide); amine stearate; 12-hydroxystearic acid; stearyl alcohol and castor waxes.
4. A composition as claimed in Claim 1 wherein the co-gellant is dibutyl lauroyl glutamide.
5. A composition as claimed in Claim 1 wherein the average molecular weight of the polyamide is at least 30,000 daltons.
6. A composition as claimed in Claim 1 wherein the average molecular weight of the polyamide is in the range of 80,000-150,000 daltons.
7. A composition as claimed in Claim 6 wherein the average molecular weight of the polyamide is in the range of 80,000-90,000 daltons.
8. A composition as claimed in Claim 6 wherein the average molecular weight of the polyamide is in the range of 90,000-120,000 daltons.
9. A composition as claimed in Claim 1 wherein the polyamide has a polydispersity of less than 10.
10. A composition as claimed in Claim 6 wherein the polyamide has a polydispersity of less than 10.
11. A composition as claimed in Claim 8 wherein the polyamide has a polydispersity of less than 10.

12. A composition as claimed in Claim 1 wherein the polyamide has a polydispersity of less than 4.
13. A composition as claimed in Claim 6 wherein the polyamide has a polydispersity of less than 4.
14. A composition as claimed in Claim 8 wherein the polyamide has a polydispersity of less than 4.
15. A composition as claimed in Claim 1 wherein the DP is a number in the range of 12-18.
16. A composition as claimed in Claim 6 wherein the DP is a number in the range of 12-18.
17. A composition as claimed in Claim 8 wherein the DP is a number in the range of 12-18.
18. A composition as claimed in Claim 1 wherein the DP is 15.
19. A composition as claimed in Claim 6 wherein the DP is 15.
20. A composition as claimed in Claim 8 wherein the DP is 15.
21. A composition as claimed in Claim 1 wherein for the polyamide of Formula IIIA, $R^1 - R^4$ are each methyl.

22. A composition as claimed in Claim 1 wherein the polyamide is a polyamide of Formula IIIB:

5

Formula IIIB

where DP is from 5-30 and n is a number in the range of 20-200 and is selected to give an average molecular weight of at least 10,000 daltons.

10

23. A composition as claimed in Claim 22 wherein the polyamide has a molecular weight in the range of 90,000-120,000.

24. A composition as claimed in Claim 22 wherein the DP is from 12-18.

15

25. A composition as claimed in Claim 24 wherein the DP is 15.

26. A composition as claimed in Claim 1 wherein for the polyamide of Formula IIIA, X, Y, DP and R¹ - R⁴ remain the same in each polymeric unit.

20

25

27. A composition as claimed in Claim 1 wherein the polyamide of Formula IIIA, contains multiple siloxane block lengths of Formula IIIC:

5

Formula IIIC

where X, Y, n, and R¹ - R⁴ have the meanings described for Formula IIIA; m is selected from the same group as n, and n and m denote the total number of units enclosed within the brackets in a regular, alternating, block or random sequencing; R⁵ - R⁸ is selected from the same group as defined for R¹ - R⁴; DP1 and DP2 may be the same or different and are each independently selected from the same group as defined for DP; and the units denominated by n and m may be structured to form either block or random copolymers.

28. A composition as claimed in Claim 27 wherein for block lengths of Formula IIIC, all of the R groups are methyl.

29. A composition as claimed in Claim 27 wherein for block lengths of Formula IIIC, DP1 = DP2.

20

30. A composition as claimed in Claim 1 wherein the solvent system comprises one or more members selected from the group consisting of:

(1) from 5-65% by weight based on the total weight of the composition of at least one non-silicone organic selected from the group consisting of C12-36 esters; guerbet alcohols having 8-30 carbons; fatty alcohols having 8-30 carbons; ethoxylated and propoxylated alcohols having 3-30 carbons; alkyl ethers having 12-36 carbons; C12-18 alkyl benzoate and benzoate ester derivatives; paraffins

25

having a distillation temperature in the range of 372-426 degrees C; isoparaffins having a distillation temperature in the range of 178-207 degrees C; and C6-30 alkyl carbonates.

5 (2) from 2-55% by weight based on the total weight of the composition of a volatile silicone selected from the group consisting of cyclomethicones and low viscosity dimethicones;

(3) from 0-10% organo-silicones; and

(4) from 0-40% of a functionalized silicone.

10 31. A composition as claimed in Claim 30 wherein the solvent system comprises one or more members selected from the group consisting of: tridecyl neopentanoate, ethyl oleate, dioctyl carbonate, isopropyl myristate, octyl methoxycinnamate, PPG-14 butyl ether, PPG-3 myristyl ether, dioctyl ether, C12-15 alkyl benzoate, isostearyl benzoate, octyl dodecyl benzoate, octyl salicylate, dioctyl carbonate, octyldodecanol,
15 and isostearyl alcohol.

32. A composition according to any one of Claims 1-31 wherein the composition is an opaque suspension.

20 33. A composition according to any one of Claims 1-31 which is made as an emulsion which is translucent to opaque.

34. A composition according to any one of Claims 1-31 wherein the bulk density of the antiperspirant active is greater than 0.61 g/cm³.

25

35. A composition according to any one of Claims 1-9 which is made as an emulsion and which additionally comprises as a solvent for the antiperspirant active a member of the group consisting of:

(a) ≤ 25 weight % water;

5 (b) ≤ 35 weight % of a glycol or polyglycol selected from the group consisting of ethylene glycol, propylene glycol, 1,2-propanediol, diethylene glycol, triethylene glycol, tetraethylene glycol, dipropylene glycol, tripropylene glycol, methyl propanediol, 1,6-hexanediol, 1,3-butanediol, 1,4-butanediol, PEG-4 through PEG-100, PPG-9 through PPG-34, pentylene glycol, neopentyl glycol,
10 trimethylpropanediol, 1,4-cyclohexanedimethanol, 2,2-dimethyl-1,3-propanediol, 2,2,4,4-tetramethyl-1,3-cyclobutanediol; and

(c) ≤ 35 weight % of a water and glycol or polyglycol mixture where the glycol and polyglycol are selected from (b);

in an amount sufficient to dissolve the antiperspirant active.

15

36. A composition according to any one of Claims 1-9 which is made as an emulsion and which additionally comprises as a solvent for the antiperspirant active a member of the group consisting of:

(a) ≤ 25 weight % water;

20 (b) ≤ 35 weight % of a glycol or polyglycol selected from the group consisting of propylene glycol, dipropylene glycol, tripropylene glycol, 2-methyl-1,3-propanediol, methyl propylene glycol, low molecular weight (less than 600) polyethylene glycol, low molecular weight (less than 600) polypropylene glycols; and

(c) ≤ 35 weight % of a water and glycol or polyglycol mixture where the glycol
25 and polyglycol are selected from (b);

in an amount sufficient to dissolve the antiperspirant active.

30

37. A composition as claimed in Claim 1 comprising at least one additional ingredient selected from the group consisting of volatile silicones, silicone gums, elastomers, polymethylmethacrylate, polyethylene, polypropylene, polytetrafluoroethylene emollients, colorants, antibacterial agents, inorganic
5 particulates and fragrances.

38. A composition as claimed in Claim 1 comprising 5-20% on an anhydrous basis of an antiperspirant active.

10
